Dear Vi:

Our analytical laboratories have analyzed the sample of waste water from your Clearwater plant that you sent to us.

The analytical determinations were done for acrylonitrile, styrene, and ethylbenzene.

The analytical results are summarized as follows:

Acrylonitrile: less than 0.1 ppb (parts per billion)

Styrene: 48 ppb

Ethylbenzene: 15 ppb

We hope this satisfies your needs, but if you have any questions please let me know.

Very truly yours,

Gene A. Conner
Account Manager
Plastics Department
